

ABSTRACT

1 A method for transferring an image disposed on a medium
2 with an image transfer device. The method comprises the
3 steps of providing the image transfer device with a
4 controller and a reader, reading the image on the medium
5 with the reader, and forming with the controller a
6 modified image from the image on the medium. The reader
7 is operably connected to the controller for reading the
8 image on the medium. The controller forms the modified
9 image from the image on the medium in response to
10 registering with the controller that the image on the
11 medium is larger than a predetermined size. The modified
12 image formed with the controller is smaller than the
13 predetermined size.
